

## EFI/MECH Blend Fuel Systems

Part # JB009

The JB009 EFI/Mechanical fuel System has many advantages.

- 1) Enables maximum horsepower by removing all EFI components from inside the injector hat.
- 2) Quick and easy access to the injectors for maintenance or repair.
- 3) Retrofits onto any manifold with mechanical port fittings within minutes. No need to machine fuel rails and bungs for electronic injectors. (Including normally aspirated tunnel rams and mechanical stack injectors.)
- 4) Allows you to control the fuel flow into your engine precisely via an ECU and laptop.
- 5) Can be used on any style of vehicle, from street to drag racing, sand, mud or tractor pulling.

Joe Blo Speed Shop has manufactured EFI systems for blown engines for over 20 years.

Our hidden EFI plates have been and are still very popular. They were originally developed for street style vehicles, but we have received many enquiries from customers wanting maximum horse power.

Many of our hidden plate system make 1000-1500hp easily. But we wanted more.

Our main objective of this new EFI system is to achieve & focus on maximum horse power potential, removing all components from inside the injector hat allows us to achieve that.

The JB009 does that and more.
